DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

Situated along Falls Road, a few hundred yards west of the Jones Falls Expressway in Baltimore County, Rockland contains fifteen buildings. These include a general store, tavern, the shell of a blacksmith shop, a carriage house, several log buildings, a group of stone rowhouses, a mill, and an eighteenth-century dwelling. Although all of the original public buildings except the smithy have been converted into private dwellings, nothing has been done to change the integrity of their original exterior appearances.

The Rockland Mill,<sup>1</sup> located on the west side of Falls Road facing northeast, is a large, rectangular building of stone construction. At the facade the structure has two stories and is five bays in length. There are transomed center doors and windows of six-over-six pane sash. At the west elevation the structure is three stories in height and five bays in length. The extremely gradual pitch of the gambrel roof is broken by cross gables and peaked dormers. Later Victorian additions include two-story flanking wings and a brick chimney shaft with a heavy ornamental cap.

The Miller's House, (A)<sup>1</sup> circa 1800, and is a two-story dwelling of an "end-hall" floor plan. Three bays in length, it has an 'A' frame roof, the ridge of which is broken at the south end by a large, flush, gable-chimney. To the west wall a two-story frame addition was built in 1890.

Facing southeast onto Old Court Road is the Tavern (B)<sup>1</sup> which is a four-part composition. The two stone portions were built first and later connected by a two-story frame hyphen. From exterior observations it is felt that the one-story wing is the earliest part and may date prior to 1800.

Of Federal character, the General Store (C)<sup>1</sup> as has the Tavern, has been renovated for use as a dwelling. The facade with its large double door, appropriate for a store, and the date stone, bearing the date 1813, at the second floor level have been preserved intact.

The first distinct block of Rowhouses (D, E, F)<sup>1</sup> dating circa 1820-30, is a finely constructed stone building composed of four dwelling units. Each original unit is two bays in width and three stories in height at the facade. The commonly shared 'A' frame roof has its ridge (north/south) broken by two large brick chimney stacks. To the northwest end of this block is a second group (H, I) of two units. This later duplex addition has two stories and each unit is four bays in width. Originally there was a one-story porch extending the width of both later units.

<sup>1</sup>See site map.

STATEMENT OF SIGNIFICANCE

Rockland, a village surrounded by interstate highways, is one of the surviving examples of a small, quiet, sylvan community of the early nineteenth century. It is caught in the midst of visual and aural pollution of twentieth-century technology. The extant industrial and domestic structures represent an aspect of the state's social and economic past rapidly being disfigured and destroyed.

The District contains a mill, a series of good examples of nineteenth-century genre architecture, several commercial structures and the Falls Turnpike Road as well as being the former home of an innovational cotton printing process.

The beginnings of Rockland lie in the eighteenth century when Thomas Johnson (d. 1791), the founder of the Johnson family in America, consolidated into one large farm several tracts of land in Baltimore County. Johnson probably lived in the "Eighteenth Century House," (N) the oldest building at Rockland.

Johnson died in 1791; his considerable estate eventually became the property of his third son, Dr. Thomas Johnson. The latter studied medicine at the University of Pennsylvania and served in the Maryland legislature. His name appears in the Baltimore City Directory for 1796 as a practicing physician. Later city directories give no mention of his name indicating that Johnson moved to his father's country estate.

Johnson's fortune was founded through his Baltimore County lands and from property interests he controlled for his wife, Joanna Giles Johnson. She had inherited land and the right to ground rents, which her husband managed, on Fells Point in Baltimore City (a National Register historic district). For at least a century the Johnson family received a large income from these holdings.

The industrial development of Baltimore County and, to a larger extent Baltimore City, centered on Jones Falls. The construction of the Falls Turnpike Road stimulated this growth. Incorporated in 1805 the instigators of the road initially wanted to connect Baltimore City with Richard Caton's lime kiln at

7. DESCRIPTION continued

On the east side of Falls Road, directly opposite the General Store, stands the shell of a c. 1815 Blacksmith's Shop (J). This was once a large, rectangular, stone structure; now (1972) only three of the original walls remain intact. The original facade was removed and renovated to allow for its present use as a garage.

A short distance north of the Blacksmith's Shop is a two-story Frame House (K) of a two-part composition. The original house is the three-bay section at the south end. Its first-level windows still retain their original batten shutters. An unusual feature of this house is its foundation walls of hewn logs enclosing a full cellar beneath the original dwelling.

Standing a few hundred feet north is a Frame House (L) possessing an exterior similar to many houses of the post World War I period. However, this was once a frame block of three separate dwelling units, each two bays in width and one-and-one-half stories in height. Though completely renovated on both the exterior and interior, traces of its original design are still discernable.

A 1805-1820 two-part Dwelling (M) is located a few yards away from the Frame House (L). This house is of log and frame construction, the log portion of which is of the earliest date. The two-story frame section has beaded clapboarding on three walls; the north gable displays what appear to be clapboards of random width riven boards.

On the crest of a hill at the extreme north end of the town is a one-and-one-half story frame eighteenth century House (N, see photograph). It is unusual because it is of a style more closely associated with the counties of Southern Maryland than with those of the northern area. Originally three bays in width (c. 1750), the house was later enlarged, about 1770, by an addition of two bays width at the north end. The projection of the roof to form a porch conjecturally dates from the time of the c. 1770 addition. This porch roof possesses a coved ceiling with raised panels and ovolo mouldings. To the north end of the building is a recessed two-story stone wing. This contains a large kitchen with a massive fireplace on the first floor level. A few feet away from the northeast corner of this building is a Square Stone Building (O) of two-story height, with a wood shingled pyramid roof. Access to its interior is gained through a double door on its west wall, and it may safely be assumed that this structure was a carriage house of a very distinct design. While the main house dates from 1750 to 1775, the stone wing and

carriage house do not appear to have been built before 1800.

Fifteen buildings have been included in this survey. There are others in or near Rockland which may have early nineteenth-century origins. There are numerous sites within the village which will be worth further study.

8. SIGNIFICANCE continued

Brooklandwood to the north of Rockland. Following the falls the turnpike passed right through the Johnson property. The Johnsons do not figure prominently in the early history of the road although Thomas Johnson owned Falls Road stock. By the end of the nineteenth century, however, the Johnsons, as well as Richard Caton's descendants, held the controlling interests in the company which still collected tolls.

The "Eighteenth Century House" predates the road. The alignment of the rest of the structures at Rockland along the roadbed indicates they were constructed subsequent to the choice of the route of the Falls Turnpike Road, c. 1806.

The combination of water power from the Jones Falls plus adequate road transportation made the Falls valley a natural site for industrial development. Factories still line the Falls today. The convenience of the valley was apparent to nineteenth-century railroad builders who placed the Baltimore and Susquehanna Railroad there as well as to twentieth-century highway engineers who ran Interstate 83 through the valley to Baltimore City.

The small commercial buildings at Rockland were probably constructed and occupied in conjunction with the opening of the road. The blacksmith's shop, the general store and the tavern were natural businesses for the area.

The buildings were rented by the Johnson family before the 1830's. The southern half of the stone row was rented with the Rockland Mill. These four houses were sold with the mill in 1855, which substantiates the claim of local historians that mill workers lived in the houses.

The Rockland Mill has had a history fraught with financial difficulty. Originally the Johnsons maintained a flour mill on the site. In 1830 Dr. Thomas Johnson and his son William Fell Johnson (d. 1862) the owners, leased the site, including a mill, a miller's house and stabling, to Albin Mellier. The lease

8. SIGNIFICANCE continued

stipulated that the Johnsons would erect a "stone dye house" one hundred feet by thirty feet. By mid-1831 Mellier's cotton mill was producing between seven and eight thousand yards or two hundred fifty pieces of calico per day. In 1836 he incorporated the Maryland Print Works Company to print cotton.

Mellier's operation at Rockland was short lived for, in 1842, the Johnsons leased the mill to new tenants, Frederick Dawson and Philip Dawson. A year later the Dawson's operation folded and a Philadelphia cotton printer, Samuel Comly, Jr., came to Rockland and rented the mill. Although the Rockland Print Works produced four hundred pieces per diem, his operation failed and by 1847 Comly was bankrupt. In 1855 Johnson sold the mill and eight and five-eighths acres to Richard W. Hook. Two years later the mill and the interior machinery burned. The property was sold at public auction for \$2550. Numerous firms and individuals owned the Rockland Mill from the 1850's until 1927 when William Fell Johnson (d. 1968) bought the property bringing it back into the Johnson family.

In industrial history the significant period of the Rockland Mill is its early years. Among the Johnson family papers exists a list of the cotton printing machinery at Rockland Mill written after one of the early failures, possibly in the 1840's. The calico printing machines, including a three-color, a two-color and a one-color machine, are unusual for the 1840's. The early cotton printing at Rockland was an innovational process--although not a financial success.

## DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Turkey Cock Hall (MHT No. BA 222) is a very plain, 1-1/2 story house of colonial design, with gable roof and clapboard wall covering. Its design is reminiscent of tidewater country houses of Southern Maryland, and the style has also been called "French Huguenot." There is a full-width front porch and its roof slopes upward and merges with the main gable roof. The house is five bays wide. There are two dormer windows; a brick chimney emerges in the middle of the roof and vents "clustered" fireplaces in two adjoining rooms. The 1798 tax list had mentioned porches or "piazzas" on two sides; only one porch survives. A small, stone, two-story recessed wing is attached to the north of the frame house and contains a large kitchen with a massive fireplace.

Stone Dwellings. The stone mill town houses on the accompanying map bear various names, some of them given in the 1972 National Register nomination form. Maryland Historical Trust Number BA 221 applies to the whole "Rockland Village."

1. Tavern. Also called "the second miller's house." North side of Old Court Road, just west of Falls Road. A long house of four segments, two stories of stone and frame, vernacular style, with gable roof. Entered via a porch recessed under an overhanging second story. The two stone portions were built before the frame section that connects them; J. Richard Rivoire, of the MHT believed that a small stone wing was the oldest part of all, built possibly before 1800. In the 1920s or 1930s, a tearoom was operated here.

2. Miller's House. No. 10,114 Falls Road. The prominent stone house at the NW corner of Falls and Old Court Roads is two stories, three bays wide, with gable roof, off-center entrance portico, frame cornice and broad brick flush gable-chimney on the south end. A photo of 1897-1900 shows no attic windows under the chimney, but these square openings appear in 1978. The frame wing at the rear (west) dates from 1890. Mill owner M. L. Garrett resided here.

3. Rockland Post Office or General Store. (MHT No. BA 815) is two stories plus attic of stone in a Federal character. There is a full width front porch with hip roofing, supported by four round columns. This building bears the date stone marked "1813" between the second story windows. It was also a store, and was advertised in 1922 as equipped with a store front. For a time it served as the Brooklandville Post Office. There are double entrance doors. Apparently unoccupied in September 1978.

4, 5. Row Houses. Nos. 10,106 through 10,112 Falls Road. This is a continuous row of houses, some units three stories and the rest two; they were occupied by mill workers and team drivers. The houses are all served by individual entrance porches with shed roofs, each porch one bay wide. The three-story block is the southern segment, and is a total of eight bays wide. The main roofing is gabled, with ribbed metal covering. The long dimensions of the houses are parallel to the road.

CONTINUE ON SEPARATE SHEET IF NECESSARY

(continued)

There are half-round gable windows (or demi-lunes) at attic level in each structure. This row is clearly shown in Plate 19 of Bromley's atlas of 1915, and a photo of 1900 shows both segments of housing. The 1918 tax ledger of District Three carried the entry "S. Tenant House 27 X 66 ..... \$1782" under the account of the mill owner of that time, M. L. Garrett.

The upper end of the row consists of two units, two stories high, similar in character, eight bays in all. The property line between the Johnson holdings and the mill lot once passed through the party walls between rows. A term paper of 1938-39 states that the miller Garrett

rearranged eight houses of four rooms each into three seven-room houses. The original wooden beams, already 100 years old, were used in the reconstruction.<sup>1</sup>

The 1928-40 tax ledger charges William Fell Johnson with "Addition to Row of Houses, \$3000" in a revision entered in 1934; the new tax base was more than the assessment of the entire row in 1928 (which was \$2000) but there do not seem to have been any more buildings put up.

<sup>1</sup>Roger Hecklinger, Helen Mixter, and Katherine Merritt, "The Rockland Mill," 1938-39 term paper, in Enoch Pratt Library VF, p. 6.

SPECIFIC DATES 1813 (stone dwellings) BUILDER/ARCHITECT Unknown

## STATEMENT OF SIGNIFICANCE

Turkey Cock Hall, a small, 1-1/2 story house, stands on a land survey of the same name, 200 acres laid out in April of 1706 for Richard Gist who accumulated a great amount of land in the area. Gist sold 80 acres of Turkey Cock Hall in 1713 to Edward Riston (also spelled Reeston, Reaston) for 34 pounds of tobacco per acre; Riston eventually acquired the remainder of the 200 acres from other owners. Dawn F. Thomas' new book The Green Spring Valley cites records in 1728 court proceedings of Riston's living in the county "at the Garrison Ridge" and she finds a reference of 1733 to the "road which leads from Edward Reeston's by Mr. Richard Gist's house."

Mary (Welch) Cook mentioned in a deposition given in 1737 or 1738, that when she and her husband came to live on part of Welch's Adventure, their nearest neighbor for many years "was Edward Riston who lived on Turkey Cock Hall."

(1)

The question rises then, if Gist had some other dwelling place near present Pikesville, was there any structure standing when Riston took possession in 1713?

Riston married three times; his last wife and first widow married Rinaldo Monk who lived nearby and was the first miller in the vicinity. Riston's daughter Anne inherited all her father's land on his death in 1749 or 1750. About the same time, Anne Riston married Thomas Johnson and in 1753, their son Rinaldo Johnson, the first of ten children was born. The Johnson family connection still continues, 225 years later.

Mrs. Thomas reports that the date "1712" inscribed on the chimney was added within the last twenty years (1958-78). Estimates for the antiquity of the house vary:

Mrs. D. F. Thomas	1707-1733
Mr. W. B. Marye	1700-1745
Rinaldo Johnson's adv.	1706.

CONTINUE ON SEPARATE SHEET IF NECESSARY

In 1794, Rinaldo Johnson placed the following advertisement in the Maryland Journal and Baltimore Advertiser, an item which no local historian has thus far quoted:

To be SOLD, or RENTED, on account of its remoteness from my present residence, for any term of years not exceeding twenty,

That truly valuable GRAZING FARM, called and known generally by the name of Turkey-Cock-Hall, situate on Jones-Falls, in Baltimore county, distant seven or eight miles from the town, of which immediate possession will be given, with or without the right of taking off the crop of small grain growing thereon. One half of the rent will be annually left in the hands of the tenant for the first five years, and one fourth of the annual rent for five years thereafter, for the purpose of erecting suitable buildings and improvements on the premises, to be judged of and declared by the proprietor, and executed by the tenant.

Such as may wish, on account of their health or other circumstances, to retire from the dread of war alarms, or the noise and bustle of a city, to the sweet, secure, and calm repose of the country, may here find an asylum, and yet not be too remote to be deprived of the pleasures and advantages of the Town. A particular description of Turkey Cock-Hall is unnecessary, as no one, it is presumed, would either buy or lease without first visiting the lands; but let it suffice, for the present, that this place has been constantly inhabited by a considerable number of people ever since the year 1706, and that there has never been a death on it (as I am well informed) since the year 1739 40, but one who was a person then eighty years of age. For terms apply to the subscriber.

RINALDO JOHNSON

Aquasco, Prince George's County, Maryland, March  
15, 1794

(2)

The 1798 tax list showed the house as a one-story frame dwelling, 44 X 22 feet, with a "piazzza" on both sides, 44 X 8 feet. There were three other one-story log houses on the property, but the mill town had not appeared. The mill founded by the Johnson kinsman, Rinaldo Monk in 1758, was nearby, downstream, and on a separate tract called Monk's Discovery, a part of Turkey Cock Hall condemned as a mill seat.

A theory offered by William B. Marye was that Turkey Cock Hall "had undergone construction three times, with the middle portion built first and the south section a few years later. His conclusions were based on the similarity of wood details inside and out; the existence of the vertical joint where the south and north portions were joined together; and the wood sill on the stone foundation which was also jointed at this point. The house contained a clustered chimney (i.e., all the fireplaces were arranged in the center of the adjoining rooms)."

(3)

(continued)

Rinaldo Johnson conveyed the old hall to his brother, Dr. Thomas Johnson in 1801; he had been listed as occupant on the 1798 assessment. The doctor had studied at the University of Pennsylvania and served in the Maryland Legislature; the 1796 Baltimore directory showed him practicing in the town. His wife, Joanna Giles Johnson, had inherited extensive lands and ground rents in Fells Point. By at least 1820, Dr. Johnson was calling the old hall "Rockland," a name that extended to the mill and grounds as well. His son, William Fell Johnson, had a large new stone and stucco house built on a hill on the west side of Falls Road in 1836-37; that house came to be the only dwelling known as Rockland.

Dr. Johnson had left Turkey Cock Hall to his daughter, Anne G. Johnson Tagart, along with the land east of the Falls Road. The property passed to Samuel H. Tagart, who left his assets to the Mayor and City Council in trust for the McDonogh Educational Fund. William Fell Johnson (2d) bought the property in 1893. It passed to William Fell Johnson (3rd) and on his death in 1968, the property and cottage passed to Dr. Robert W. Johnson, whose son lives next door, the 9th generation of related persons to dwell there.

Stone Dwellings. The stone houses on the west side of Falls Road at Rockland date to 1813 as demonstrated by an inscribed stone in the building known as the post office or general store. The entire "town" was part of the capitalistic venture of one man, Dr. Thomas Johnson, and was built as an adjunct to the Rockland Grist Mill, also dated at 1813 by Johnson family records. Dr. Johnson built two miles of the Falls Turnpike Road to assure an outlet for his mill products. The 1818 assessment book Dr. Thomas Johnson with the tract Turkey Cock Hall and a gristmill and a sawmill worth \$1000. The mill was a big venture for that period, and the 1820 census form shows that the capital investment was \$25,000. In the period before Europe recovered from the Napoleonic wars, Maryland millers had been doing a booming business and getting high prices for flour, but there were numerous complaints on the 1820 census form about peace and poor business, and Samuel Scott, who was either hired miller or tenant operator, at what he listed as "Rockland Mills," reported that flour sales were dull.

In 1831, the flour mill was converted to a calico printing works under arrangement with Dr. Johnson's heirs. The establishment was "conducted by Aline Mellin, an European of great knowledge, as well practical as theoretic." (4) By 1840, Mellin or Mellier, was insolvent and his elaborate equipment was advertised for sale, but the auction notice in the American stated that the mill itself belonged exclusively to Mr. William F. Johnson. (5) Both Johnson and his real estate agent advertised the calico works for rent in 1847 and 1848, respectively. The 1848 ad mentioned "outhouses for hands." (6) Richard Hook and Company bought the mill and some of the stone houses in 1855 and were using it to spin cotton when the works burned on October 21, 1857. By at least 1863, Rockland Mill was back in business, spinning yarn, presumably reconstructed within the old walls; it was a flour mill again in the 1877 atlas. Early in 1897, it was converted to steam power, and kept going until 1922, when offered for sale under default of mortgage. In 1927, William Fell Johnson (3rd) bought the old family mill and associated stone houses. (7)

(continued)

The mill went through a number of diverse manufacturing uses including the making of wooden toys, paper products, Standard Brand cake mixtures, Wagner extracts, hermetically sealed bread products, and Dorothy Lamour Enterprises cosmetics. None of these undertakings enjoyed a long run, and eventually the mill became vacant, and one tragedy took place there in 1975 when a 52-year-old woman went into the mill, took tranquilizers, and died. In 1970, there had been a plan to use the village as a focus for building a James W. Rouse planned community, but the project was not carried through. (8)

Five years later, a new development plan was announced with J. R. Azola & Associates as prime contractors. (9)

In 1978, the Johnsons sold the mill to the Azola firm to carry out an adaptive use plan drawn up by James R. Grieves Associates to convert the mill to professional office space. The necessary parking permits were secured early that same year and grading was completed by October 1; the millrace was also cleared of underbrush.

The Rockland dwellings have remained a compact village, written up every so often in the newspapers under such headlines as "Falls Road Village Depends on a Venerable Industry," or, "Mansion, Dinky Post Office, Contribute to Rockland's 'Country Club' Life." (10)

Various accounts have confused the gristmill-calico factory with the Rockland Bleach Works downstream, which was founded by three brothers from England named Wright about 1810. A deed of 1860 mentions W. F. Johnson as sole owner of the bleaching plant, but that industry has generally followed a totally different history and is still manufacturing curtain linings in a complex of buildings a mile downstream, structures that are replacements of the original works burned in 1884.

The obituary of William Fell Johnson (3rd) reported that in spite of his education, sporting interests, and social connections, Mr. Johnson did all the repairs himself for the tenants in his rental properties. Following his death in an auto accident in 1968 at age 83, the property descended to still other members of the Johnson family. (11)

The entire village and mill were added to the National Register of Historic Places in 1973 as an historic district, following submission of documentation by Miss E. Frances Offutt of the Baltimore County Office of Planning and Zoning in 1966 and preparation of a National Register form in 1972 by Nancy A. Miller and J. Richard Rivoire.
